We are excited to announce that we have been working on and are gearing up to launch The Institute for Tissue Regeneration and Repair, an organization created in response to the growing interest and desire to collaborate and deliver interactive educational programs that support the practice of evidence-based/evidence-guided medicine and the use of non-invasive devices and technologies for the regeneration and repair of tissue as well as of musculoskeletal and vascular structures. This is a special non cme educational and training opportunity which will feature AAPSM Fellows as instructors.

Our goal is to deliver peer-to-peer interactive learning environments that enhance clinical education and training, providing personalized experiences that deliver results; ultimately improving clinical and economic outcomes and patient experiences non-surgically.

The purpose in creating The Institute for Tissue Regeneration & Repair is to bring the latest research, techniques, and practice management to our members through online content, webinars, workshops, preceptorships, and collaboration with other healthcare professionals in their field.

The Institute for Tissue Regeneration & Repair which will be comprised of leading Physicians, Scientists and Researchers in the area of multidisciplinary regenerative medicine.

We are planning to host our first meeting **November 8-9, 2019 in Boston** and hope you can attend!

Dr. Karsten Knobloch, MD, FACS and president of German Shock Wave Society DIGEST, will also be attending and will serve as a keynote speaker.

Our meeting plan is the following:
• Friday, November 8—General meeting 9am-5pm
• Saturday, November 9—General meeting 9am-2pm

In addition to EPAT/ESWT, we will highlight other key regenerative techniques and technologies at the meeting to include Electromagnetic Transduction Therapy (EMTT), Ultrasound, Biologics, and Laser. Education and training will include lectures, round tables and hands-on training.
